The Effect of Multiple Micronutrient Supplementation on Left Ventricular Ejection Fraction in Patients With Chronic Stable Heart Failure: A Randomized, Placebo-Controlled Trial.

J Am Coll Cardiol HF 2014;2:308-17.

Figure 1 printed incorrectly. The correct figure and legend are below.

The authors apologize for this error.

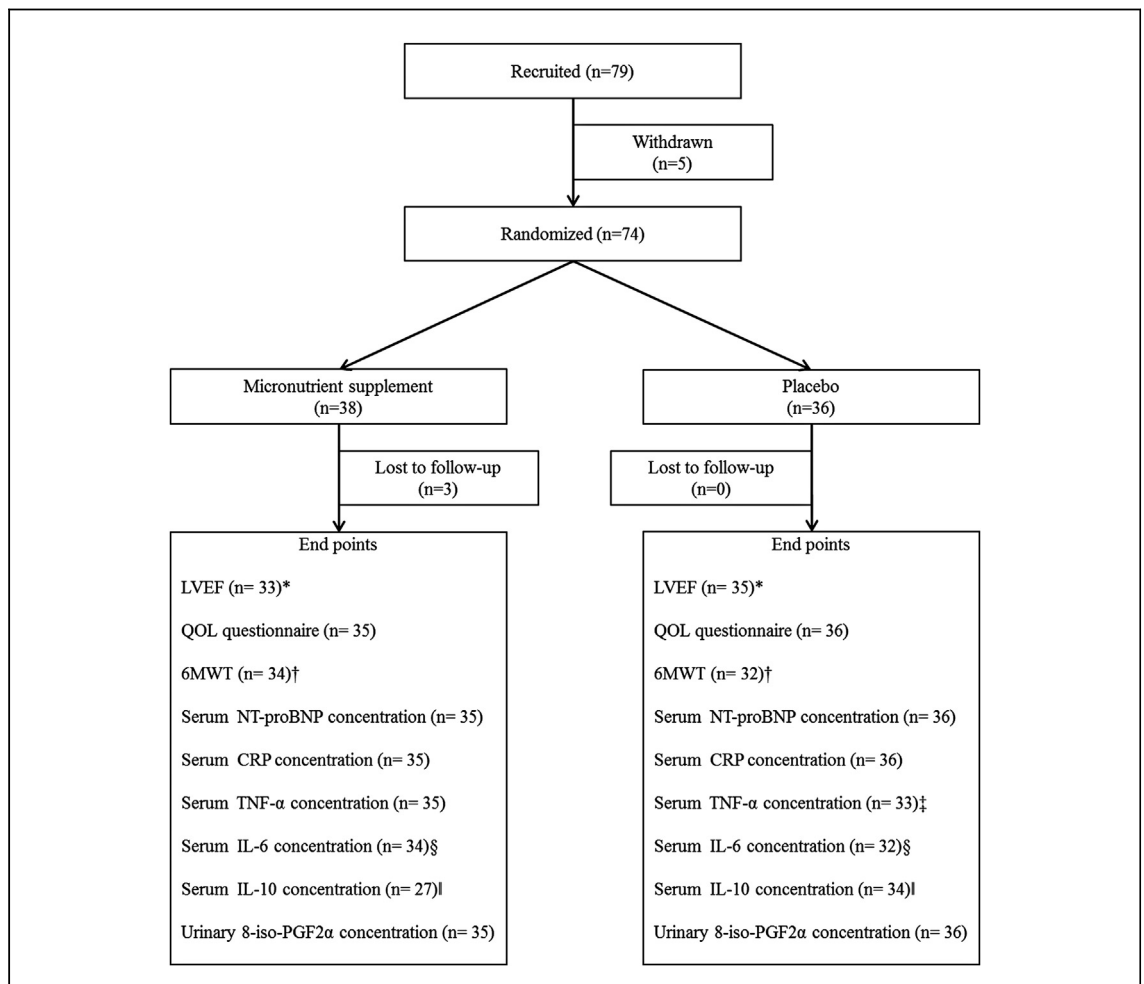

FIGURE 1 Summary of Recruitment, Randomization, and Protocol Completion

*1 subject was unable to attend the 12-month scan due to personal reasons, 1 subject was unable to attend due to illness, and images from 1 subject were of inadequate quality for analysis. †5 patients were unable to perform the 6-min walk test (6MWT) due to joint disease/poor mobility. ‡Tumor necrosis factor- α (TNF- α) results from 3 patients, §interleukin (IL)-6 results from 5 patients, and ||IL-10 results from 10 patients were rejected due to quality control (intra-assay coefficient of variation >25%). 8-iso-PGF2 α = 8-iso-prostaglandin F2 alpha; CRP = C-reactive protein; NT-proBNP = N-terminal prohormone of brain natriuretic peptide; QOL = quality of life.
